# YEAR 7 －APPLICATION OF NUMBER <br> ＠whisto＿maths <br> <br> Solving problems with addition and subtraction 

 <br> <br> Solving problems with addition and subtraction}

## What do I need to be able to do？

I By the end of this unit you should be able to：

## 1－Understand properties of addition／subtraction

－Use mental strateges for adodition／subtraction
Use formal methods of addition／Subtraction for integers I Use formal methods of addition／Subtraction for decimals｜ Solve problems in context of perimeter
Sove problems with finance，tables and timetables
Sove problems with frequency trees
｜－Solve problems with bar charts and line charts
Keywords
I I Commutative：changing the order of the operations does not change the result
I Associative：when you add or mutiply you can do so regardless of how the numbers are grouped
Inverse：the operation that undoes what was done by the previous operation．（The opposite operation）
Placeholder：a number that occupies a position to give value
Perimeter：the distance／length around a 2D object
I Polygon：a 2 D shape made with straight lines
I Balance：in financial questions－the amount of money in a bank account
I｜Credit：money that goes into a bank account
I｜Debit：money that leaves a bank account
$============\Perp=============================1$

Iaddition／Subtraction with integers

1．Number lines
1．Part／Whole diagrams

## Qdodition is commutative

Formal written methods
Subtraction the order has to stay the same
$360-147=360-100-40-7$
－Number lines help for addition and subtraction
－Working in 10 ＇s first aids mental addition／subtraction
Show your relationships by writing fact familes

Remember the place value of each column You may need to move 10 ones to the ones column to be able to subtract

Money uses a two decimal place system．
142 on a calculator represents $£ 1420$
Check the units of currency－work in the same
1

## Frequency trees

60 people visited the zoo one Saturday morning
26 of them were adults． 13 of the adult＇s favourite animal was an elephant 24 of the children＇s favourite animal was an elephant．

The overall total ＂60 people＇
a frequency tree is made up from part－whole models． One piece of information leads to another
unit It is where their row and column intersects

Bus／Train timetables

| Harton | 1005 | 1045 | 1130 |
| :---: | :---: | :---: | :---: |
| Bridge | 1024 | 1106 | 1147 |
| Aville | 1051 | 1133 | 1205 |
| Ware | 1117 | 1202 | 1233 |

Each column represents a journey，each row represents the time the＇bus＇arrives at that location

TIME COLCUALTIONS－use a number line

Two－way tables

Where rows and columns intersect is the
outcome of that action．

Bar and line charts

Use addition／subtraction methods to extract information from bar charts．
eg Difference between the number of students who waked and took the bus． Wak frequency－bus frequency

When describing changes or making predictions
－Extract information from your data source
－Make comparisons of difference or sum of values．
－Put into the context of the scenario
